

Local Food

Although the Napa Valley's main agricultural product is grapes, other crops are starting to appear. Since most other California counties are focused more on food crops, we can take advantage of their farming as well. Locally-grown foods are sold primarily through farmers markets, and almost-locally grown (nearby counties)—or at least West Coast-grown—food can be delivered by subscription to your home or to a convenient pick-up location.

We hope you'll find this list useful. Please let us know of corrections, or hopefully additions, to this list.

Food is so essential that we have to ensure that we have a steady supply of it. Growing your own is the best solution. Supporting a local farmer is also excellent, particularly since that farmer can probably turn out a lot more quantity and variety than you can.

It makes sense to have both home and neighborhood gardens. Your home gardening can be as simple as herbs, sprouts, and a few tomatoes—or much more if you have the time and space. Community gardening benefits you by contact with your fellow neighbors as much as it does from the actual food itself.
